

Polylen Pipeline Tape

Polylen anticorrosive tapes protect pipelines against extreme environments including aggressive solids.

The company "Center of Tubes Insulation" produces high quality anticorrosive coating of standard, forced and very forced types for outer pipes surface with diameters from 25 to 1220 mm. in plant and field installations in accordance with: AWWA C-214, ASTM D 1000, EN 12068

Outer protective polymeric wrapping serves as hermetic, water -chemical-mechanical-resistant covering for installation and construction works aimed for long-term usage. Adhesive polymeric composition used as glued up layer, which due to exploitation up to 60 C degrees doesn't melt into viscoelastic condition.

Anticorrosive coating by means of adhesive 2 layer polymeric tapes was tested within installation and construction working areas with diameter up to 1220mm., under influence of extreme temperatures and aggressive ground characteristics.
