

# Bath, Cisterns, Ferroconcrete Wells Lining

“Center of Tubes Insulation” LLC carries out bath, cisterns, ferroconcrete wells lining for further preventing of their corrosion in accordance with **NSF/Ansi Standard 60 or 61**.

Liner is PVC membrane for most containment applications, providing excellent resistance to inorganic and alkalis, in addition to a wide range of other corrosive materials.

Cistern liners are ideal for updating your cistern storage tank. They are custom built to fit the size of your tank, which creates a water-tight system to prevent leaks through the storage process. The cistern liners available at Fab-Seal Industrial Liners, Inc., will give your tank a longer life span and increase your storage capabilities for your tank.

The plating and metal finishing industry liners with weirs, sumps, steps, sloped floors, saddlebags are not obstacles to prevent the proper lining of a tank for you.

Drop-in plating and metal finishing liners provide a **quick, cost effective solution for leaking steel and concrete tanks** that are used for containment of anodizing, chrome plating, galvanizing, and other metal cleaning and treatment solutions.

Structurally supported by tank walls, flexible, non-metallic, heavy duty Fab-Seal liners are **a proven remedy for leaking tanks and secondary containment areas**.

# Water Tank Liners for Variety of Containment Needs

“Center of Tubes Insulation” LLC, offers water tank liners for most containment applications, including:

- Clear well liners
- Concrete Cisterns
- Concrete tanks
- Fiberglass tanks
- Lagoon liners
- Pit liners
- Pond liners
- Steel tanks
- Underground vaults
- Waste transportation container linings
- Wood tanks

Primary liners for pits, ponds, and lagoons are designed, fabricated and installed to contain the fluid that needs to be controlled, and the secondary containment liners are made to contain nearly any substance and acts as the last line of defense behind the primary liner.
